TECHNICAL SKILLS

Programming Languages: Python, Typescript, Javascript, HTML5, CSS, Java, C++ , C, Go, MJML

Frontend: React, React Native, jQuery, NextJS, Angular, Bootstrap, Tailwind CSS, Material UI, Playwright, Jest, Selenium, React Query, Zustand

Backend: MongoDB, MySQL, PostgreSQL, Scala, Node.js, tRPC, Spring Boot, GraphQL, Snowflake, Express.js, Spark, Firestore, Pytest, Junit, Cucumber, Mongoose

AI and Tools: Azure, AWS, GCP, Firebase, Figma, Vercel, Expo, Docker, Git, Github, Data Dog, Twilio, Sendgrid, Sento, Kafka, CircleCI, Github Actions, Postman, Jira, Confluence, Claude, Cursor

WORK EXPERIENCE

Full Stack Developer

ByteKitchen (acquired by Lightspeed Hospitality), Remote

November 2024 - November 2025

- As sole full stack developer, hardened the ByteKitchen platform ahead of its acquisition by **Lightspeed Hospitality**, driving 450 security vulnerabilities and licensing issues to zero and authoring 20+ architecture documents, then continued building the same product suite at Lightspeed post-acquisition
- Implemented and debugged features across 4 web products and 2 **React Native** mobile apps serving 20 restaurants, owning both frontend and backend in **React**, **Next.js**, **TypeScript**, and **Node.js**
- Built and standardized a reusable **React** and **TypeScript** component library with **Zod**-validated forms and data-visualization dashboards, delivering a consistent UI across all 4 products and reducing duplicated UI code
- Built the core **AI/LLM** feature that scraped and parsed incoming order emails into a centralized, filterable order dashboard (by channel and date), replacing manual email-by-email order entry; integrated **Square** (POS), **Gmail** (OAuth2), and 10+ catering channels through a **REST** integration layer handling roughly 50 online orders per restaurant per day
- Migrated and rebuilt the suite onto Lightspeed's products in **React/Next.js** and **Node.js** after the acquisition, shipping through **Circle CI/CD** with **Docker** and **Kubernetes**, building accessible (**a11y**) interfaces with **React Query** for client-side data caching

Full Stack Developer

Nisum, Pleasanton, California

July 2022 - June 2024

- Leveraged **Spark**, **Kafka**, **Databricks**, **Spring Boot**, and **Java** to develop large scale distribution systems and maintenance of 10+ data processing systems tailored for data processing to **SQL** and **NoSQL** databases and data warehouses
- Developed **Python** scripts on public cloud platform such as **Azure** to modify and clean up 2 million production-level records, resulting in a 20% increase in data accuracy.
- Led a cohort of 15 software engineers to architect an Inventory Management System in **Javascript** and **React**, and practicing Agile methodologies (Jira and Confluence)
- Implement unit testing through **Junit** and **Cucumber** which increased code coverage to 90% and enhancing code quality.

Full Stack Developer

Ride Share, San Diego, California

July 2021 - September 2021

- Crafted a user interface utilizing **React Native** and **Figma**, implementing 10+ pages and reusable components for delivering a list of carpooling posts tailored to location, destination, and scheduling requirements
- Collaborated with a team in a disciplined agile development environment using **Jira**, researching algorithms for over 20 use cases in UI/UX design
- Integrated backend functionality for handling account creation and storing rider/driver posts, implementing over 7 API endpoints and ensuring efficient data management in the system database using **MongoDB**, **Node.js**, and **Express**

Frontend Developer

Cooking with Crumbs, San Diego, California

September 2020 - December 2020

- Engineered numerous pages and reusable components using mobile development technologies **React Native** and **Expo**, asynchronously fetching 5000+ recipes from Spoonacular API and rendering components based on user pantry and preferences
- Designed 25+ use case designs using **Figma** and refining the interface based on peer feedback

Frontend Developer

IntElect, San Diego, California

May 2020 - September 2020

- Prototyped NLP and AI models, increasing keyword extraction efficiency and reducing manual data extraction by 15%.
- Learned **React.js** and **Selenium**, to implement 20+ UI components through a modular testing framework to ensure TDD and quality.
- Utilized **Python** libraries, such as **Scrapy** and **Selenium** for information retrieval of 4,000 LinkedIn/Indeed Job Postings in order to accurately find the most sought after skills and technologies given a user's major

EDUCATION

University of California, San Diego

La Jolla, CA

Bachelors of Science, Computer Science

September 2019 - June 2022

Cuyamaca College

El Cajon, CA

Associates of Science, Uni. Transfer of Math and Science

August 2017 - June 2019
